

Business Process Management (BPM) Software Suites

Architech Solutions is an elite group of technology consultants who are dedicated to delivering professional services around Business Process Management (BPM) systems integration. We currently work with the following BPM tools:

SmartBPM® Suite. - high-volume, decision-intensive exception and process management meeting complete cycle of work across the enterprise. Process Commander®, with the PegaRULES® engine at its core, drives the principles of work lifecycle management necessary for success in today's business environment: Process Commander addresses essential user requirements to deliver SmartBPM® in a single integrated application.

Oracle Business Process Management Suite 11g offers the flexibility that the business demands, hand-in-hand with the power IT requires. The result is an agile platform that brings together your existing applications, enabling you to react quickly to new business requirements. Oracle BPM Suite 11g simplifies your path to process management success with a unified process foundation, user-centric design, and social BPM interaction.

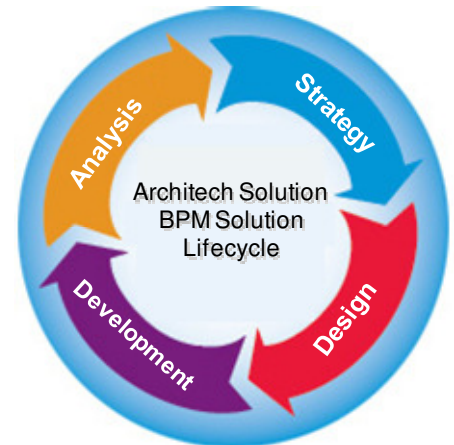

The Appian BPM Suite is the only 100% Web-based BPM platform, delivering the ease of use, comprehensive features and flexibility required to accelerate process improvement. By simplifying process collaboration between business and IT, Appian empowers business decision makers, while allowing IT to easily extend, integrate and personalize its BPM applications: Collaborative User Portal, Rapid Application Development, Real-Time Process Architecture, and Flexible Deployment Models.

BPM Solution Lifecycle Consulting

Architech Solutions consultants collaborate with the client at all phases of the software development lifecycle and interacted with each business and technical team to ensure a quality solution was developed on time and within budget.

- Solution Design Strategy
- Coordination of Business Focus Groups
- Business Requirements Gathering
- Functional Requirements Definitions
- System Architectural Designs
- Development Strategy and Approach
- SDLC Methodology Delivery
- Project and Solution Delivery Management

Phase 1:	Analysis – determine business needs, navigate the pros and cons of different architectures and technologies, and advise on best solution
Phase 2:	Strategy – work with your executive and management teams in helping you define the profile of ideal BPM system and identify the potential benefits to top and bottom line
Phase 3:	Design – provide superior systems engineers and consultants to act efficiently, creatively, and intelligently in system development and transforming requirements into a BPM solution
Phase 4:	Development - help manage your current BPM initiative specifically in four key areas: executive management, project management, program management, and systems engineering
